ABSTRACT

Jasper Ian Mark: Example UNC Dissertation Format
(Under the direction of the HMSC Program)

I successfully used this format for my dissertation submission in 2026, and I hope it serves you equally well. This section should contain your abstract (maximum 150 words), summarizing the purpose, methods, key findings, and implications of your work.

As you explore this template, you will encounter a range of useful features within LaTeX that allow for precise control over document structure and formatting. While it may feel unfamiliar at first, it is a powerful tool for producing polished, publication-quality documents.

That said, some formatting elements in this template are fixed to meet institutional requirements. You are encouraged to maintain the overall structure while customizing the content to reflect your work.

Good luck—you're closer to the finish line than it feels.

To me, myself, and I,
I finally did it,

And to all those who helped me along the way,
we made it.

ACKNOWLEDGEMENTS

This document represents the culmination of years of work, persistence, and a remarkable ability to continue moving forward despite frequent uncertainty about what, exactly, was going on.

If you are reading this as you prepare your own dissertation, it is worth noting that very few people feel entirely ready for this moment. The process is rarely linear, clarity is often delayed, and confidence tends to arrive well after it would have been most convenient. That is normal. Progress, more often than not, looks like persistence disguised as confusion.

There will be times when the work feels too large, the questions too complex, and the path forward unclear. In those moments, it may help to remember that the goal is not perfection, but completion—and that meaningful work is almost always the result of sustained effort rather than sudden insight.

You will likely revise more than you expect, doubt more than you anticipated, and learn far more than is immediately visible on the page. Somewhere along the way, the pieces will begin to cohere. And even if it does not feel like it, you are, in fact, becoming an expert.

So keep going. Trust the process just enough to continue. Ask good questions, accept imperfect answers, and write anyway.

And when you finally reach the end, take a moment to appreciate what you have done—because finishing a dissertation is, objectively, a slightly unreasonable thing to accomplish.

CHAPTER 1: INTRODUCTION

1.1 Purpose of This Template

This chapter demonstrates the basic structure of a dissertation written in LaTeX. It shows how to organize text into chapters and sections, how to include citations, and how to use glossary terms consistently throughout a document.

Sections (created using `\section{}`) divide content into logical units. Each section should represent a coherent idea or topic.

1.2 Working with Citations

Citations are inserted using commands such as `\supercite{}`. These commands pull references directly from your bibliography file (e.g., `.bib` file) and format them automatically.

For example, you can cite prior work like this.[1]

Using citation commands ensures consistency in formatting and allows you to easily update or change citation styles without editing text manually.

1.3 Conceptual Writing Example

In many research domains, complex systems are characterized by interactions across multiple scales and levels of organization. Writing in an introduction should clearly motivate the problem, define key concepts, and situate the work within existing literature.[2]

This section demonstrates how narrative text, citations, and structure work together to form a cohesive argument.

1.4 Using Glossary Terms and Acronyms

Glossary terms are defined in a separate file (e.g., `common/acronyms.tex`) and referenced using the `\gls{}` command.

For example, University of North Carolina (UNC) refers to the Universirt of north carolina at chapel hill. But I could enter type ”gls” again and now it is abbreviated UNC.

It also works with Great Day to Be A Tarheel (GDTBATH), which is especially great when we beat DOOK in basketball. You’ll hear everyone say GDTBATH.

One final example for Human Movement Science Curriculum (HMSC), our doctoral program. We like to say it the HMSC program is interdisciplinary, and is housedin the UNC school of medicine.

On first use, the full term is typically displayed (e.g., “electroencephalography (EEG)”), and on subsequent uses, only the abbreviation appears. In adobe acrobat PDF viewers, hovering over the term will display its definition.

This approach ensures consistent terminology throughout the document and is especially useful in fields with many abbreviations.

1.5 General Writing Structure

Structuring your writing in this way improves clarity and helps guide the reader through your argument.

1.6 Summary

This chapter demonstrated the foundational elements of writing in LaTeX, including: (i) Chapter and section organization (ii) Citation usage with `\supercite` (iii) Glossary term integration with `\gls` (iv) General principles for structuring academic writing

These components form the basis for building more complex chapters in a dissertation.

CHAPTER 2: REVIEW OF THE LITERATURE

2.1 Example Section

Lorem ipsum dolor sit amet, consectetur adipiscing elit.[1]

The major components of this framework are summarized in **Table 2.1**.

Table 2.1. Example Table Title for Demonstration Purposes. This caption appears in the List of Tables

Category	**Components**	**Description**
Example Row 1	Example Elements	Lorem ipsum dolor sit amet, consectetur adipiscing elit.[1]
Example Row 2	Example Elements	Sed do eiusmod tempor incididunt ut labore et dolore magna aliqua.[2]
Example Row 3	Example Elements	Ut enim ad minim veniam, quis nostrud exercitation ullamco laboris.[3]

Note. This row spans all columns using `\multicolumn`. Use this section for abbreviations, clarifications, or additional notes about the table.

Lorem ipsum dolor sit amet, consectetur adipiscing elit.

2.2 Another Section

An example glossary term is HMSC.

Example inline math: $p < 0.05$

Example display math:

$$y = mx + b$$

2.3 Summary

Lorem ipsum dolor sit amet, consectetur adipiscing elit.

CHAPTER 3: METHODS

This chapter outlines the general procedures used in this study. In a typical dissertation, the Methods chapter should provide enough detail for the study to be replicated, including participants, data acquisition, and analytic procedures.

3.1 Study Overview

Lorem ipsum dolor sit amet, consectetur adipiscing elit.[1]

As illustrated in **Figure 3.1**, the overall study workflow consists of multiple stages.

Figure 3.1. Short caption. This short caption appears in the LIST OF FIGURES This is the full caption that appears under the figure. Captions should be descriptive enough to understand the figure without referring back to the main text.

3.2 Example Section

Lorem ipsum dolor sit amet, consectetur adipiscing elit.[2]

An example glossary term is HMSC.

Methods chapters often include subsections such as Participants, Data Acquisition, Preprocessing, and Statistical Analysis. These can be created using `\subsection{}` to maintain a clear hierarchy.

3.2.1 Example Subsection

Lorem ipsum dolor sit amet, consectetur adipiscing elit.

Example inline math: $p < 0.05$

Example display math:

$$y = mx + b$$
